Grass Time Partners 21st Annual Bull & Female Sale

Welcome Friends & Fellow Beef Producers,

On behalf of the Grass Time Partners (GTP), we welcome you to the 21st Annual Grass Time Partners Bull/Female Sale. It has been the goal of the GTP group since the first sale to provide genetics that will be profitable to your bottom line. We strive to produce cattle that will do that with breed leading EPD's and phenotype that will make the right kind. We also understand the needs for each producer are different and always have a wide variety of bulls to fit whatever needs you have.

This year's offering includes the calving ease bulls you expect, as well as the curve benders and performance bulls that will make the heavy feeder calves that will demand top dollar! There is also a tremendous group of registered females that are prime to go home and be great additions to your herd. Like always, the commercial females are top-notch quality and will be profitable genetics for your operation. There will be everything from open heifers ready to breed, bred heifers, bred cows and cow calf pairs. So, whatever you need for your herd it will be at the sale! Thank you to our sponsors, Boehringer Ingelheim and Hinton Mills for their support of our sale.

Grass is here and the future of the beef industry looks very promising as prices have increased so now is the time to take advantage of the opportunity to add valuable genetics to your operations. Position your operation to increase profitability going forward. We would be glad to discuss your operation and what genetics would be the best fit for your individual needs so feel free to contact any of the consigners with any questions you may have. We appreciate your interest in the Grass Time Partners Sale and look forward to seeing you at the new sale location - Paris Stockyards on April 11, at 7 p.m.

Sincerely,

Grass Time Partners

Health:

All animals selling are eligible for interstate shipment and will have proper health papers. All animals have been vaccinated for blackleg, IBR P13, BVD, and de-wormed with a name brand dewormer in the last 10-45 days. All bulls have passed a BSE and are ready for service.

Trucking:

Truckers are available to assist you in shipping your purchases.

Liability:

All persons who attend this sale do so at their own risk.

Online Bidding:

Watch and bid online at www.DVAuction.com.

This sale will be broadcast live on the internet.

DVAuction
Broadcasting Real-Time Auctions
Real time bidding & proxy bidding available.

In order to bid online, please pre-register with DV Auction by 1 p.m. on Monday, April 11.

This one is my favorite! When you want big, stout animals, with the phenotype to win at the show ring, but most importantly have those great mother cows to put back in your herd, go find some Payweight 1682 sons. V03 has a CED +13, WW +78, and a YW +136. All 3 EPD's in the Angus breed's top 10%!!! Easy calving, heavy weaning, and top finishing, with a +93 in Weaning (\$W) money values which are in the top 2% of the AAA. Look no more.

This is a super attractive young bull with clean lines a great disposition. His EPD package and pedigree are second to none. With calving ease, unbelievable growth that will have them feeders weighing more at the market. Great feet scores, good carcass, and 5 out of the top 6 \$values in the top 10 percent with 4 being in the top 2%. Being a Growth Fund son going back to the famed U049 this bull has performance written all over him. If you are looking for pounds at weaning and yearling while sleeping good during calving season don't overlook Money Market!

This is a super nice bull with great lines and depth. His pedigree is designed to produce maternal power with frame and pounds. He is produced by the pound producing Deer Valley Growth Fund but, his dam is what ties it all together with Discovery 2240 going back to the legendary 6108. The bottom side of the pedigree has numerous million dollar producers. This family of cattle have been staples for many ranches around the U.S. If you need a sleep all night double-digit calving ease bull that has unlimited power in the pedigree Rita's Fund is a can't miss opportunity.

2 BAR OBJECTIVE 863

This ET female is a product of the dam Crazy K 6429 whom served in the Spruce Mtn. and Banner Elite Genetics program. This dam was purchased for \$35,000 from the Crazy K program in Michie, Tennessee. 2029 stems from EXAR monumental whom has been a AI sire in the Express Ranch bull battery for a few years. This female has length of spine with nice phenotype and rib shape. She has a huge spread from 2.2 to 168 the fanny cow family is well know for producing frame and muscle while not sacrificing phenotype. If you are looking for a well-bred superb looking front pasture type look no further.

Here is a female that stems from the BJ Angus program that has looks and EPD's to spare. She is a double-digit calving ease female with growth that is sure to produce the front pasture kind. When you look at the sire Growth Fund and what he has done for the Industry he speaks for himself. The Dam coming from the legendary BJ program in Manhattan Kansas stemming from the famous EXAR angus bulls Denver 2002B and Stud. Frame and maternal traits are all through this pedigree. This female is open and ready to breed to the bull of your choice.

FALL-BRED COWS

Lot #	Tag/Tattoo	Owner	DOB	Description
167	622/2143	Clairebrook Farms		What a tremendous pair! This pair shows what exactly this hybrid does and why we keep doing it. Half Red Angus, half Hereford; Red baldy cow, 6 years old, AI bred on 12/3/21 to WLF Merlin 018A (Red Angus bull), EPDs: CED +15, WW 81, YW 130, Milk 35. Has heifer calf out of True North, born 9/30/21.
168	6115/2169	Clairebrook Farms		Solid cow who has done a good job for us with lots of potential left in her. Commercial 6 year old Angus cow, AI bred to E&B Wildcat 9402 on 12/3/21 with EPDs CED +11, WW 86, YW 160, Milk 28. Has bull calf out of Boyd Hereford bull, born 11/6/21.
169	6152/2145	Clairebrook Farms		Solid Cow who has done a good job and has always raised solid calves every year. Commercial Angus 6 year old cow, AI bred to E&B Wildcat 9402 with EPDs CED +11, WW 86, YW 160, Milk 28. Calf black bull sired by Tehama Patriarch F028. Has bull calf out of Patriarch, born 9/30/21.
170	6041/2107	Clairebrook Farms		Solid Cow who has done a good job with replacements in the herd. Commercial Angus 6 year old cow, AI bred to E&B Wildcat 9402 with EPDs CED +11, WW 86, YW 160, Milk 28. Heifer calf is commercial Angus sired by Tehama Patriarch F028. Has heifer calf out of Patriarch, born 9/2/21.
171		4-C Livestock	01/2020	Simmental/Angus cow. Has a BWF heifer calf on side, born 12-5-21.
172		4-C Livestock	2020	Angus/Hereford cow. Has an bull calf from Angus sire, born 12-10-21.

Thank you for attending.
We hope to see you at next year's sale,
April 10, 2023.

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted whether the animal has a genotype and the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is more favorable.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

MANAGEMENT

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Claw Set (Claw), is expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes.

Foot Angle (Angle), is expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait economic selection indexes where a higher values suggest more profit when comparing two individuals.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with current production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning.

Cow Energy Value (\$EN), is expressed in dollar savings per cow each year due to lower cow maintenance energy requirements (due to lactation and body size) with a larger number being more favorable.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle and sell on a carcass weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), an index, expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

American Angus Association \$Value Indexes

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

ANGUS
THE BUSINESS BREED

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase pre-weaning growth through additional weaning weight and maternal milk with expenses adjustment for mature size and maternal milk.

Cow Energy Value (\$EN), an index expressed in dollars per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in future daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing \$EN savings differences include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

LONGRANGE®
(eprinomectin)

Extended-Release Injectable Parasiticide

5% Sterile Solution

For the Treatment and Control of Internal and External Parasites of Cattle on Pasture with Persistent Effectiveness

Not for use in female dairy cattle 20 months of age or older, including dry dairy cows. Not for use in calves to be processed for veal.

Not for use in breeding bulls, or in calves less than 3 months of age.

Not for use in cattle managed in feedlots or under intensive rotational grazing.

CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian.

INDICATIONS FOR USE

LONGRANGE, when administered at the recommended dose volume of 1 mL per 110 lb (50 kg) body weight, is effective in the treatment and control of the following internal and external parasites of cattle:

Gastrointestinal Roundworms	Lungworms
<i>Bunostomum phlebotomum</i> – Adults and L ₄	<i>Dictyocaulus viviparus</i> – Adults
<i>Cooperia oncophora</i> – Adults and L ₄	
<i>Cooperia punctata</i> – Adults and L ₄	
<i>Cooperia surrabadia</i> – Adults and L ₄	
<i>Haemonchus placei</i> – Adults	Grubs
<i>Oesophagostomum radiatum</i> – Adults	<i>Hypoderma bovis</i>
<i>Ostertagia lyrata</i> – Adults	
<i>Ostertagia ostertagi</i> – Adults, L ₄ and inhibited L ₄	Mites
<i>Trichostrongylus axei</i> – Adults and L ₄	<i>Sarcoptes scabiei</i> var. <i>bovis</i>
<i>Trichostrongylus colubriformis</i> – Adults	

Parasites	Durations of Persistent Effectiveness
Gastrointestinal Roundworms	
<i>Bunostomum phlebotomum</i>	150 days
<i>Cooperia oncophora</i>	100 days
<i>Cooperia punctata</i>	100 days
<i>Haemonchus placei</i>	120 days
<i>Oesophagostomum radiatum</i>	120 days
<i>Ostertagia lyrata</i>	120 days
<i>Ostertagia ostertagi</i>	120 days
<i>Trichostrongylus axei</i>	100 days
Lungworms	
<i>Dictyocaulus viviparus</i>	150 days

DOSAGE AND ADMINISTRATION

LONGRANGE® (eprinomectin) should be given only by subcutaneous injection in front of the shoulder at the recommended dosage level of 1 mg eprinomectin per kg body weight (1 mL per 110 lb body weight). Each mL of LONGRANGE contains 50 mg of eprinomectin, sufficient to treat 110 lb (50 kg) body weight. Divide doses greater than 10 mL between two injection sites to reduce occasional discomfort or site reaction.

Do not underdose. Ensure each animal receives a complete dose based on a current body weight. Underdosing may result in ineffective treatment, and encourage the development of parasite resistance.

LONGRANGE is to be given subcutaneously only. Animals should be appropriately restrained to achieve the proper route of administration. Inject under the loose skin in front of the shoulder (see illustration) using a 16 or 18 gauge, ½ to ¾ inch needle.

Sanitize the injection site by applying a suitable disinfectant. Clean, properly disinfected needles should be used to reduce the potential for injection site infections.

Body Weight (lb)	Dose Volume (mL)
110	1
220	2
330	3
440	4
550	5
660	6
770	7
880	8
990	9
1100	10

Withdrawal Periods and Residue Warnings

Animals intended for human consumption must not be slaughtered within 48 days of the last treatment. This drug product is not approved for use in female dairy cattle 20 months of age or older, including dry dairy cows. Use in these cattle may cause drug residues in milk and/or in calves born to these cows. A withdrawal period has not been established for pre-nursing calves. Do not use in calves to be processed for veal.

Animal Safety Warnings and Precautions

The product is likely to cause tissue damage at the site of injection, including possible granulomas and necrosis. These reactions have disappeared without treatment. Local tissue reaction may result in trim loss of edible tissue at slaughter.

Observe cattle for injection site reactions. If injection site reactions are suspected, consult your veterinarian. This product is not for intravenous or intramuscular use. Protect product from light. LONGRANGE® (eprinomectin) has been developed specifically for use in cattle only. This product should not be used in other animal species.

When to Treat Cattle with Grubs

LONGRANGE effectively controls all stages of cattle grubs. However, proper timing of treatment is important. For the most effective results, cattle should be treated as soon as possible after the end of the heel fly (warble fly) season.

Environmental Hazards

Not for use in cattle managed in feedlots or under intensive rotational grazing because the environmental impact has not been evaluated for these scenarios.

Other Warnings: Parasite resistance may develop to any dewormer, and has been reported for most classes of dewormers.

Treatment with a dewormer used in conjunction with parasite management practices appropriate to the geographic area and the animal(s) to be treated may slow the development of parasite resistance.

Fecal examinations or other diagnostic tests and parasite management history should be used to determine if the product is appropriate for the herd/flock, prior to the use of any dewormer. Following the use of any dewormer, effectiveness of treatment should be monitored (for example, with the use of a fecal egg count reduction test or another appropriate method).

A decrease in a drug's effectiveness over time as calculated by fecal egg count reduction tests may indicate the development of resistance to the dewormer administered. Your parasite management plan should be adjusted accordingly based on regular monitoring.

Macrocyclic lactones provide prolonged drug exposure that may increase selection pressure for resistant parasites. This effect may be more pronounced in extended-release formulations.

TARGET ANIMAL SAFETY

Clinical studies have demonstrated the wide margin of safety of LONGRANGE® (eprinomectin). Overdosing at 3 to 5 times the recommended dose resulted in a statistically significant reduction in average weight gain when compared to the group tested at label dose. Treatment-related lesions observed in most cattle administered the product included swelling, hyperemia, or necrosis in the subcutaneous tissue of the skin. The administration of LONGRANGE at 3 times the recommended therapeutic dose had no adverse reproductive effects on beef cows at all stages of breeding or pregnancy or on their calves.

Not for use in bulls, as reproductive safety testing has not been conducted in males intended for breeding or actively breeding. Not for use in calves less than 3 months of age because safety testing has not been conducted in calves less than 3 months of age.

STORAGE

Store at 77° F (25° C) with excursions between 59° and 86° F (15° and 30° C). Protect from light.

Approved by FDA under NADA # 141-327

Made in Canada.

LONGRANGE (EPRINOMECTIN) IMPORTANT SAFETY INFORMATION: Do not treat within 48 days of slaughter. Not for use in female dairy cattle 20 months of age or older, including dry dairy cows, or in veal calves. Post-injection site damage (e.g., granulomas, necrosis) can occur. These reactions have disappeared without treatment. Not for use in breeding bulls, or in calves less than 3 months of age. Not for use in cattle managed in feedlots or under intensive rotational grazing.

Hinton Mills

SERVING FARMERS SINCE 1918

www.hintonmills.com

As in past years, several of the cattle that will come through the ring at this sale have been fed Hinton Mills feed or mineral. Others may have benefited from the animal health items or equipment we sell, such as vaccines, waterers, working systems, or scales. Whether you are trading with us or someone else, it's clear that the animals at this event each year have been well cared for.

The Hinton Mills farm supply business has been serving farm families in our region since 1918. We got our start in the cattle business when our founder, Frank L. Hinton, was orphaned after his parents died when he was a child. At a young age, he was able to help put food on the table by raising and selling calves. The money he earned selling cattle eventually became the seed money for our family business, Hinton Mills. Four generations later, we are still serving farm families like yours.

Hinton Mills has five farm supply locations scattered across northeastern Kentucky: Fleming County Farm Supply, Jabetown Mill, May's Lick Mill, Frank Hinton & Son and Hinton Mills Cynthiana. Hinton Mills carries a wide variety of agricultural products, but our focus is on feed, seed, fertilizer, crop protection, animal health products, and fencing materials. We are very confident in our ability to provide our customers with the trusted products, service, and advice necessary to manage a farming operation of any type or size.

Just like our business, we know your farm business has been built on trust. That's why we won't take your trust lightly. Whether you're an old friend or first-time customer, we'll work hard to earn your trust with thoughtful, experienced advice about the right products for your unique farming operation. We hope you'll visit with our team at the sale or stop by one of our five locations to let us know more about your cattle operation and how we can best serve you.

Sincerely,

The Hinton Mills Team

NOTES:

**MOREHEAD STATE
UNIVERSITY**

SOAR Higher.

Kentucky's Morehead State University has served generations of students and families through hands-on education. We empower students to find their purpose and achieve their goals through our quality academic programs and personalized support. Our academic programs consistently earn national rankings for excellence, accessibility and best value.
